

ASSIGNMENT TWO [5 Marks]

Instructions

1. Solve the problem in groups
2. Use C# console application

Task: Employee Information System

Required: Create a simple system to store and manage employee information, such as:-

1. employee name,
2. ID,
3. monthly salary.

The program should use structures to define the employee and arrays to store multiple employees' data.

Task Requirements:

Define a structure named Employee with the following fields:

- Name (string): The employee's name.
- EmployeeId (int): The employee's unique ID.
- MonthlySalary (decimal): The employee's monthly salary.

Create an array of Employee structures to store the details of 5 employees.

Implement functionality to:

1. Input the name, ID, and monthly salary for each employee.
2. Calculate the yearly salary for each employee.
3. Display the employee's name, ID, and yearly salary.
4. Find and display the employee with the highest yearly salary.
